## Professional SDD Rotators

**Finishing solutions that add value to your business**

## KEY BENEFITS

The RTM Rotator is Rotation module for optimum print speed for A5 / 5.5" x 8" booklets (LEF -> SEF A4 / Letter).

The Rotator is specifically designed to improve processing speed in situations where paper needs to be fed short edge first. The Rotator infeed and outfeed speed is 1,5 m/sec

But, more functionality does not necessarily mean that the machine has to be more complex to operate: switching between rotated and non-rotated paper is extremely simple and easy to do.

In Auto Mode the RTM automatically switches between Bypass and Rotation mode based on a 'LPF' (Large Paper Format) signal from the printer.

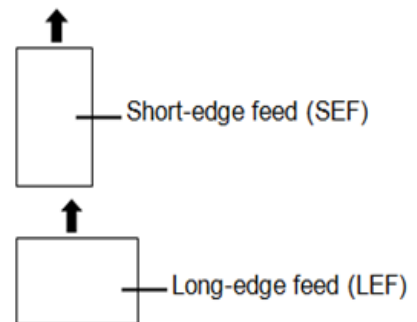

SDD Rotator Modules are used in BLM200, BLM300(C), BLM6300, BLM6400(C) and BLM6900(C) Systems:

- RTM6440 for BLM200, works from Left to Right and has infeed and outfeed height is 102 cm
- RTM6940 for BLM300(C), works from Right to Left and has infeed and outfeed height is 102 cm
- RTM6340 for high speed BLM6300, works from Left to Right and has infeed and outfeed height is 102 cm
- RTM6440 for BLM6400(C), works from Left to Right and has infeed and outfeed height is 102 cm
- RTM6940 for BLM6900(C), works from Right to Left and has infeed and outfeed height is 102 cm

## Specially designed for high reliability and long production runs

### TECHNICAL SPECIFICATIONS

Are described in specifications of the Booklet Maker Systems

SDD B.V. Print Finishing Solutions.
